Ph.D. (Johns Hopkins University)
Political and Social Issues of Japan, America as A Foreign Country

Akemi YASUI

M.A. (Tōhoku University)
Japanese Language, Japanese in Tourism: Hotel Japanese

Nagoya

The Gateway to Central Japan

Nagoya is one of the leading metropolises of international trade, industry, and culture in Japan. Direct flights to Nagoya from numerous major cities around the world are available.

Nagoya enjoys a temperate climate. Summers (July, August) are hot and very humid, with August temperatures averaging about 33 degrees centigrade. The winter (December–February) is chillier than the thermometer might indicate because of the cold north winds. However, there are relatively few days of snow. Heavy rains occur in the June rainy season, and it also rains frequently in September. Temperatures during the spring season from March to May are very comfortable while the autumn season from September to November can be rather cool, with temperatures averaging about 17 degrees centigrade.

You can easily get around by bus, subway, railway, or taxi. A commuter's pass for the city bus and subway system is available. The average monthly transportation expense for someone with a commuter's pass is about ¥10,000.
